

# Emoji Password

## Usage guide

### Environment Requirements:

Python 3.9 & above

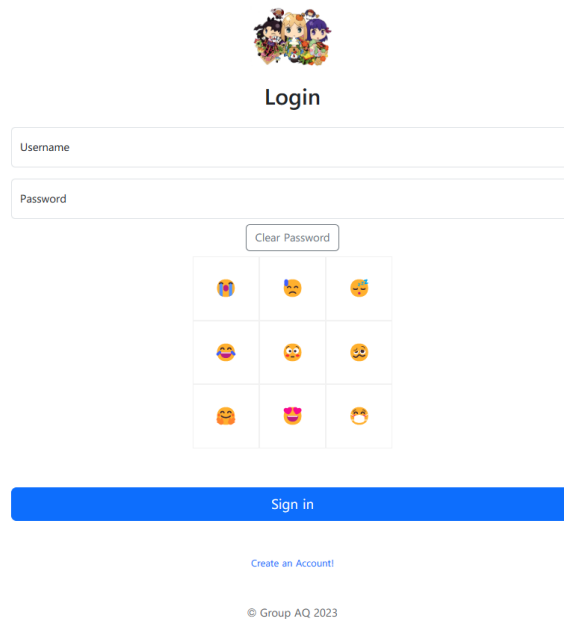

Django 4.1.7 (install instruction: `pip install django`)

### Startup Project:

Enter the project root directory and use the term: **`python manage.py runserver`**

### Usage instructions:

After the project starts, enter the system through <http://127.0.0.1:8000/>, it will direct you to the login page by default. Next, enter the registration page through the "Create an Account" button at the bottom for user registration. Then provide a username and select 4 emoji as the password. After successfully registering and logging in, it will direct you to the main page. Finally, you can log out through the log out button in the upper right corner.
